SIEGFRIED BOZZA

Full-Stack Web3 Engineer · Next.js, TypeScript, Node.js, Solidity, Foundry

France (CET) · Open to relocation (APAC preferred) or remote · flexible with time zones

siegfried.bozza@protonmail.com · siegfriedbozza.com · github.com/SiegfriedBz · linkedin.com/in/siegfriedbozza

PROFESSIONAL SUMMARY

In software since 2022, now a full-stack engineer at Prismo.io, a B2B SaaS built with Next.js, TypeScript and Supabase (CQRS, hexagonal architecture). On my own time I build Web3 projects end to end on testnets: Solidity contracts tested with Foundry, contract events projected into Postgres, AI-agent workflows that settle on-chain, and the dApps on top. Former molecular-biology researcher (three peer-reviewed papers), which drives my DeSci work. Looking for a full-time role on a Web3 or DeSci team.

TECHNICAL SKILLS

Web3 & Smart Contracts: Solidity, Foundry (contracts, tests, deploy scripts), OpenZeppelin (ERC-20/721/1155), Chainlink (VRF v2.5, Automation, Price Feeds), Ethereum, Base, viem, wagmi, EIP-712, EIP-1559, HD wallets (BIP-32/39/44), OriginTrail DKG, Reown AppKit, IPFS, Alchemy, Tenderly

Testing & DevOps: Vitest, Cypress, Jest, GitHub Actions, Vercel, CI/CD, Git Flow

Backend & Data: Node.js, Hono, PostgreSQL, Supabase (RPC, RLS, Realtime, Edge Functions, pg_cron), Neon Postgres, Drizzle ORM, SQLite, CQRS, event-driven design, idempotent workflows, Stripe API

Frontend & UI: React 19, Next.js (App Router), TypeScript, TanStack Query / Table, nuqs, Tailwind CSS, shadcn/ui, Zod, Recharts, React Hook Form, Lingui

AI & Orchestration: LangGraph.js (agentic graphs, HITL, checkpointers), Inngest (durable execution), Gemini, Exa AI, Claude Code (AI-assisted development)

Languages: French (native) · English (fluent)

WORK EXPERIENCE

Prismo.io — Hybrid, France · Full-Stack Engineer · Aug 2024 – Present

- Built product features end to end in a Next.js, TypeScript and Supabase monorepo (App Router, Server Actions, pnpm, Turborepo): a process builder, a training-management module (catalog, sessions, approvals, budgets) and dashboards with KPIs (TanStack Table, nuqs, Recharts).
- Postgres and Supabase: SQL migrations, row-level security policies, RPC functions, triggers, pg_cron jobs, Realtime notifications and Deno Edge Functions for ETL, behind a hexagonal, event-driven core with CQRS.
- Vitest unit and integration tests and Cypress end-to-end tests, required in GitHub Actions CI before every merge; Biome, conventional commits and semantic-release; role-based permissions and FR/EN i18n (Lingui).
- Two-week sprints in Linear, Git Flow and peer review on every PR; coding agents (Cursor, Claude Code) for planning and implementation, their code reviewed and tested like any other PR.

Independent study & open source — France, Vietnam & Indonesia · Jul 2023 – Aug 2024

- Studied full-stack and Web3 development while travelling, building my own React, Next.js and TypeScript projects (Tailwind CSS, shadcn/ui, MongoDB, Jest).
- Contributed front-end features to DeXter-on-Radix, an open-source order-book DEX.

Renuo AG — Zurich, Switzerland · Software Engineer Intern · Jul 2022 – Jun 2023

- Built and shipped full-stack features using Ruby on Rails, JavaScript/TypeScript, React, and RSpec in agile delivery cycles, supporting production releases across multiple agency client accounts.

SELECTED PROJECTS

LabsTrail — Open Ratings for Life-Science Papers · Oct 2026 · GitHub · Project · Live

- Papers are published to the OriginTrail DKG as Knowledge Assets from an EIP-712-signed submission; anyone can request a rating on Base Sepolia. Gemini answers the reporting checklists (CONSORT, ARRIVE…) for the kinds of study a paper reports, with quotes that code checks.
- Every write converges: stores, mints, fulfils and cancels read state first. HMAC-verified Alchemy webhooks, request-derived Inngest event ids, a cron reconciler and a serialized oracle lane.
- Vitest and Foundry tests (unit, fuzz and invariant), decisions recorded in ADRs; staging and production isolated. On testnet and under construction: human review with Chainlink VRF is next.

Wallet Watcher — Custody Backend Slice · Oct 2026 · GitHub · Project

- Node.js / TypeScript service (viem, Hono, Zod, SQLite) for Ethereum Sepolia: BIP-39/44 HD wallets, an append-only ETH ledger and signed EIP-1559 withdrawals behind a localhost admin API.
- Withdrawals booked from their receipts, bigint wei end to end, balance snapshots pinned to their block, a worst-case fee check before signing, signing behind one module; Vitest tests run offline in CI.

BioVerify — Agentic DeSci DApp · Jan – Apr 2026 · GitHub · Project · Live · Article

- Peer review as a coordination game: authors submit research artifacts pinned to IPFS and stake ETH, a LangGraph submission agent screens plagiarism (Exa AI + Gemini), Chainlink VRF v2.5 selects reviewers from the staked pool, reviewers sign EIP-712 reviews, Gemini or (after an escalation) a senior reviewer sets the verdict, and a LangGraph review agent settles it on-chain.
- Getter-light contract with HMAC-verified Alchemy webhooks projecting events into Neon Postgres (optimistic concurrency); LangGraph checkpointers carry multi-day review, Inngest retries the agent runs that chain events start. Foundry tests, including VRF edge cases; Base Sepolia + Ethereum Sepolia.

More projects

- **Bet2Gether** · Oct – Nov 2025 · GitHub · Project · Live — prediction market on Ethereum Sepolia: Chainlink Automation resolves rounds from Price Feeds, VRF v2.5 picks ERC-1155 rewards; known payout bug and oracle limits documented.
- **Forge** · Nov 2025 · GitHub · Project · Live — atomic ERC-1155 crafting on Ethereum Sepolia (burnBatch + mint in one transaction), a rules contract that owns the ledger; tested with Foundry.
- **GavL** · Sep – Nov 2025 · GitHub · Project · Live — Next.js, TypeScript and Supabase auctions: Postgres triggers for the highest bid and Realtime notifications, RLS, pg_cron closure, signature-verified Stripe webhook (test mode), i18n FR / EN / DE; known bid-integrity gaps documented.

EARLIER CAREER (PRE-SOFTWARE)

KIBAG Gruppe · SERPOL · SITA Remediation (SUEZ) — France & Switzerland · Land Remediation Engineer / Project Manager · 2012 – 2020 — Led environmental fieldwork, soil-sampling operations, subcontractor coordination, and compliance reporting for industrial remediation sites.

University of British Columbia · INSERM — Canada & France · Molecular Biology Researcher · 2001 – 2009 — Genomic research in neural stem cells and epigenetics; co-author on three peer-reviewed publications (J. Neurosci. Res. · Fungal Genet. Biol. · Dev. Biol.).

EDUCATION

2025 — EVM Architecture & Smart Contract Security (core curriculum) — Metana (remote)

2023 — M.Sc. Blockchain Technologies — University of Barcelona (remote)

2022 — Full-Stack Software Engineering Bootcamp — Le Wagon, Zurich (Switzerland)

2012 — M.Eng. Civil & Environmental Engineering — École des Mines (France)

2001 — M.Sc. Molecular Biology & Genetics — University of Montpellier (France)
